Country	Switzerland

Hotel expansion with timber element construction

Time was of the essence: the hotel and restaurant could only be closed for a short space of time, so construction needed to be as quick as possible. Timber elements are the ideal solution for this kind of specification. We built the timber structure for the new Gibswilerstube hotel building in four months.

The new hotel has 16 rooms, a restaurant and spa area. The new structure, built by us, features a frame made from 135 m³ of spruce and fir wood. The entirely new floor area measures 800 m² and is spread across three floors. The existing ground floor was retained but was given a new concrete ceiling and now serves as the foundation for the new building. What's more, the new facade of plaster base panels with rear ventilation is finished in a sunny yellow, just like its predecessor.

Reconstruction of Hotel Gibswilerstube

Gibswil, CH

The Hotel Gibswilerstube's new replacement building looks better than ever. And in the same sunny yellow as its predecessor.

16 comfortable rooms are ready for guests in the Hotel Gibswilerstube's new building.

Terrace with stylistic dormer and perfect views of the rustic surroundings.

The modern bathrooms in the new hotel building are just as stylish.
