Construction type	Wood element construction
Services	Timber construction
Construction	2011
Locality	Sargans
Country	Switzerland

New timber gym building for the regional sports centre

The regional sports facility in Sargans was designed from scratch as a timber construction. The support structure runs throughout all areas of the building and governs the spatial organisation and architectural appearance of the main areas of use, including the foyer, the hall and the gym rooms. The main load-bearing structure comprises forty laminated timber frames, some of which are two storeys in height. Spaced at 1.60 m intervals over an area of approx. 30 m wide and 60 m long, the 10-m-high frames in the hall create the impression of an intricate wooden slatted wall/ceiling. The

ceiling of the storey below the wet zones is a wood/concrete composite.
